Meeting Notes from 12/02/2015

Discussion:
Go over progress since last meeting:
- Session view done with sockets
- Markdown editor works (with preview mode and keyboard shortcuts)
- Snippet has fixed height (can toggle view to show more content)
- Display warning if user tries creating session for a class that already recently had a session created (only applies to session within this class)
- Save counts update
- Flag snippets that user didn't author
- Print view

Subscribe functionality will be implemented
User home page will have real data by tomorrow for the demo (courses subscribed to and most recent sessions)
Login (consider using modal)

Needs to be finished:
- Unlocking
- Home and Profile View
- Dropdown on the stash page to view other users' stashes
- Document UI testing and security testing
- Revisit model tests
- Look into double scroll bar on a page

Why does search for class appear on all other pages? Easy navigation.
One concern is real-time of websockets on heroku.
For demo tomorrow, have two people logged in and show the real time aspect of sessions.
